

- The green bridge has many functions in Ganghwa city. It will take different directions throughout the landscape components.
- Implanting trees along the crossroads to create certain equilibrium between nature and urban fabrics and to limit urban expansion.
- Reconnecting the rice fields situated on extreme the borders of the main street with horizontal green grids to keep the interrelation between the two cultivated axes.

→ The design consists of the transformation of certain urban areas into touristical infrastructures. Tourism in Ganghwa should emphasize the special characteristics of its agriculture and rural lifestyle and the beauty of the center's surrounding. It can also have an important economic impact on the local incomes. The relationship between the locals and the lands would become much closer than before because people's interest and appreciation to their culture would give them back the sense of pride and attachment to the agriculture which is considered as a part of Ganghwa's cultural identity.
